SUMMARY

Computer Science student at Naresuan University, passionate about web development and building web applications that are easy to use and scalable. Seeking an internship in Frontend, Full-Stack, Backend, Software Development, or QA to apply real-world skills and grow as a well-rounded developer.

EDUCATION

2018 - 2023 **Yangklon Wittaya School**
Science-Mathematics Program

2023 - Present **Naresuan University**
Bachelor of Science in Computer
Science

SKILLS

Programming Languages : Python, HTML / CSS, Java, JavaScript, TypeScript

Frameworks / Libraries : React, Next.js, Tailwind CSS

Tools : Git, GitHub, Figma, Docker, Vercel, Prisma, n8n

Services : LINE Messaging API, Supabase, Cloudinary, AWS

Database : PostgreSQL

PROJECTS

Naresuan NUDorm <https://github.com/Panuwatjr-05/NUDorm> <https://nu-dorm.vercel.app>

A web application centralizing dormitory listings near Naresuan University, allowing students to search, compare, and choose accommodations in one place.

Tech Stack : Next.js , TypeScript , Prisma , PostgreSQL , NextAuth , Cloudinary , Vercel

- Built a multi-filter search system to help students find accommodations more conveniently
- Developed a Side-by-Side comparison feature to help students make faster decisions
- Built a listing management system allowing dorm owners to post and manage their own listings
- Implemented role-based access control for User, Owner, and Admin to ensure secure access

BidBid <https://github.com/Panuwatjr-05/BIDBID> <https://bidbid-app.vercel.app>

A full-stack online marketplace supporting both fixed-price purchases and real-time auction bidding within a single platform.

Tech Stack : Next.js , TypeScript , Supabase , PostgreSQL , Supabase Realtime , NextAuth , Vercel

- Implemented real-time auction bidding with live countdown timers via Supabase Realtime
- Architected role-based access control for Buyer, Seller, and Admin to ensure secure platform management
- Built a store management system allowing sellers to add products and choose between Fixed Price and Auction listing types

CHILL FILL https://github.com/Panuwatjr-05/Chill_Fill <https://chill-fill.vercel.app> <https://line.me/R/ti/p/@118nzphy>

A food ordering web application operating entirely through LINE Messaging API, enabling customers to place orders without a dedicated mobile app

Tech Stack : React , Vite , Supabase , PostgreSQL , LINE Messaging API , Vercel

- Built food ordering via LINE Messaging API eliminating the need for a standalone app
- Designed payment slip verification within LINE to complete ordering and payment in one place
- Developed Admin Panel with menu CRUD and sales dashboard for efficient restaurant operations

Planning <https://github.com/Panuwatjr-05/Planning> <https://planning-pearl-xi.vercel.app>

A full-stack personal planning application that replaces traditional note-taking with a structured and organized digital workflow.

Tech Stack : Next.js , TypeScript , Tailwind , Supabase , PostgreSQL , Cloudinary , Vercel

- Built task scheduling with priority levels and deadlines to improve time management
- Developed calendar view to give users an instant overview of upcoming tasks
- Implemented goal tracking and idea board to support long-term planning

RESEARCH

A LINE-Based Financial Platform and Decision Support Dashboard for Farmers Ongoing Research
Naresuan University Advisor : Adirek Rungrangsee

A full-stack web application integrated with LINE to help farmers record farm finances and track crop health through a decision-support dashboard.

Tech Stack : Vue.js, Node.js, Express.js, Supabase, LINE Messaging API, LIFF, n8n, DigitalOcean

- Developing a LINE-based system allowing farmers to record income/expenses without a dedicated app
- Built an automated workflow using n8n to process and store farm data into Supabase
- Displaying results on a dashboard to support cost analysis and planting cycle planning

EXPERIENCE

Competition | Empathetic Support Solutions (Idea Pitch Day 2024)

- Co-designed a Social Enterprise app matching volunteers with wheelchair users, elderly, and visually impaired individuals
- Developed a 4-phase business roadmap to drive financial sustainability and expand services nationwide

Prompt Engineer | AI Vibe Coding Competition (SCI ACADEMIC EXPO 2026)

- Competed in a high-pressure AI Coding Challenge, solving CSV data extraction tasks within a strict 2-minute limit
- Engineered precise prompts to generate optimized Python scripts for fast and accurate data analysis

IT Support Staff | PACCON 2026 (Pure and Applied Chemistry International Conference 2026)

- Managed IT setup and audio-visual equipment for a dedicated session room at a large-scale international conference
- Provided real-time technical support to ensure speakers and participants could operate smoothly throughout the event
